

# VOLTAGE REGULATORS

## OUR PASSION CREATES YOUR POWER

At Wells, we are here to develop a voltage regulator for your most challenging vehicle applications. We stand at the ready, as a true problem-solving solutions provider. Our dedicated engineers provide a highly specialized skill set and a deep understanding of voltage regulators and their applications. Our extensive and thorough product insights translate into the design and manufacture of voltage regulators that meet even the toughest customer requirements.

Wells Engineered Products offers a level of service and quality that goes beyond the competition. Using carefully selected, high-grade materials, we are able to ensure a reliable, high-quality product that can withstand the toughest conditions. Combine this with our customized solutions, and Wells Engineered Products is able to create a product perfectly suited to your specific needs.

# FROM FLOW TO FOCUS

*Quality Materials and Exacting Processes. Creating Customized Solutions to Meet Your Specific Needs*

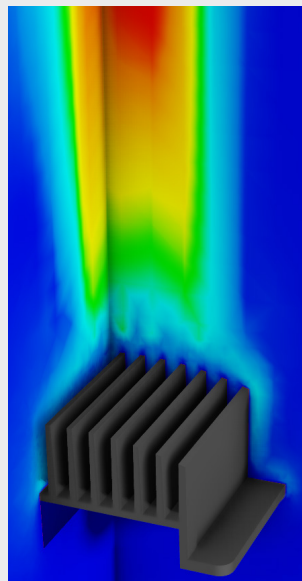

*Working With Wells Engineered Products For Your Voltage Regulator Needs Offers You A Number Of Unique Benefits:*

## **COMPUTER MODELING/SIMULATIONS**

Computer modeling and simulation is integral in our development phase. They allow us to view and test individual elements to determine optimal performance before the first parts are manufactured. Our computer modeling process helps us to reduce development time and cost, while improving quality and timing.

## **CONSTRUCTION CONCEPT, TECHNIQUE AND PROCESS**

Our intimate understanding of each element that goes into the construction of a voltage regulator means we also know what it takes to create the best product out there. We deploy industry-leading construction techniques and processes to deliver the highest quality end product.

## **PROXIMITY**

Our North American facilities are located in close proximity to some of the premier recreational, automotive and agricultural manufacturers on the continent. This affords us the opportunity to meet personally with customers and their engineering teams at each phase of the development, testing and manufacturing process. We believe that our facilities represent our core values, which is why we offer our customers plant tours to see exactly how we operate.

## **AUTOMATION**

Automation is key in the electronics manufacturing process. It ensures a repeatable process and yields higher quality parts. Automation helps us to create a consistent product you and your customers can rely on, day in and day out.

**WELLS**  
ENGINEERED PRODUCTS

Ready to experience a true state of flow with your voltage regulators? Let us show you how with a free consultation.
